

Professional Objective:

Aiming to excel in IT by embracing new roles, responsibilities, and technologies. Seeking a Full Stack Software Developer role to leverage my skills in crafting efficient, scalable solutions that drive user satisfaction and business growth.

Professional Summary:

- 1.9 years in web development, specializing in HTML, CSS, JavaScript, Svelte, TailwindCSS, MongoDB, Nginx, and Redis.
- Skilled in designing and implementing RESTful APIs using NodeJS and managing MongoDB database.
- Experience with deploying applications using Nginx and managing server-side caching with Redis.
- Hands-on experience with Git and Bitbucket for version control.
- Working on both Linux and Windows operating systems.
- Quick learner with ability to grasp new technologies, software & hardware.
- Can work independently or work within a team environment.

Technical summary:

- Languages : JavaScript, HTML, Nodejs
- Frontend Frameworks : Svelte
- CSS Frameworks : TailwindCSS, Bootstrap v4
- Database Systems : MongoDB
- Web Servers : Nginx
- Caching : Redis
- Version Control : Git, Bitbucket
- Operating System : Linux and Windows
- Cloud Platforms : AWS and GCP

Educational Qualification:

Course	M.E (CAD / CAM)	BE (MECH)	HSC	SSLC
Percentage	81.1	76.3	86.25	90.6
Completed on Year	2019	2015	2011	2009
Institution	Arignar Anna Institute Of Science and Technology	Rajalakshmi Engineering College	St.Joseph's Hr. Sec. School	St.Joseph's Hr. Sec. School
University	Anna University Chennai	Anna University Chennai	State Board of Tamil Nadu	State Board of Tamil Nadu

Professional Experience:

- Working as a Junior Software Developer in Docchain.io by Print2Block since November 2022 to till date.
- Interned as a Full Stack Software Developer at Docchain.io by Print2Block from July to November 2022.

Work Experience with Key Responsibilities:

Role: **Junior Software Developer.**

Project Title	Manufacturer Application - Blockchain Secured Labels
Client	Internal Project
Project Description	Developed and managed a backend system for a blockchain-secured labeling application, providing secure URLs and detailed project information through advanced label management. Additionally, worked on the frontend for the navigation section.
Responsibilities	● Solely handled backend development using Node.js, implementing secure features with JWT for authentication and SHA-256 for hashing sensitive data. ● Managed MongoDB for efficient data storage and retrieval related to labels and project details. ● Integrated Redis to enhance application performance by speeding up data retrieval processes. ● Configured and managed Nginx for server deployment, including setting up SSL certificates for secure data transmission. Handled all Nginx-related configurations. ● Used PM2 for managing backend processes, ensuring reliable and continuous operation of the application. ● Executed end-to-end deployment, including server setup, application deployment, and performance optimization. ● Developed the navigation bar section using Svelte and TailwindCSS, ensuring a responsive and user-friendly interface.
Duration	May 2024 to Till date.
Technology Used	Node.js, MongoDB, Redis, JWT, SHA-256, Nginx, PM2, SSL Certificates

Project Title	KYC Management System
Client	Internal Project
Project Description	Developed and managed the backend for an internal KYC (Know Your Customer) management system, designed to streamline user identity verification processes similar to those used by banks. The system included secure authentication and data management features.
Responsibilities	- Implemented the backend using Node.js, focusing on secure user authentication with JWT tokens and hashing sensitive user details using SHA-256 algorithms. - Utilized MongoDB for efficient data storage and retrieval, ensuring robust data management and security. - Integrated Redis for caching to enhance data retrieval speed and improve overall application performance. - Configured and managed Nginx as the web server, ensuring efficient request handling and secure access. Used PM2 for process management to maintain application stability and uptime. - Handled deployment processes, including server configuration, performance tuning, and ensuring secure application access through best practices.
Duration	January 2024 to April 2024
Technology Used	Node.js, MongoDB, Redis, JWT, SHA-256, Nginx, PM2

Project Title	Company's Main Application - Document Issuing Platform
Client	Internal Project
Project Description	Contributed to the development of the company's main application, a sophisticated Blockchain based document issuing platform. The project involved building a user-friendly interface for managing and issuing documents, enhancing both functionality and user experience.
Responsibilities	- Developed and optimized user interfaces using Svelte and TailwindCSS, ensuring a seamless and responsive design for the document issuing platform. - Implemented new features and functionalities with JavaScript, working closely with design and backend teams to ensure alignment with project goals. - Collaborated with designers to transform mockups into functional, visually appealing interfaces, focusing on improving user interaction and experience. - Performed code reviews to ensure adherence to best practices, maintain code quality, and enhance application performance.
Duration	March 2023 to December 2023.
Technology Used	Svelte, TailwindCSS, JavaScript.
